

Agriculture, FoodTech & Rural Development

Problem Statements:

1. Analyzing data derived from the Govt. Land Information System (GLIS)

Harnessing GLIS Data for Societal Challenges: Develop analytics solutions utilizing GLIS data to address societal challenges and inform evidence-based decision-making. Solutions should focus on domains like Urban Planning, Infrastructure Development, Environmental Conservation, Land Management, and Socio-economic Analysis.

2. Increase the shelf life of fruits and vegetables & Postharvest Processing. Food waste and loss is an important issue worldwide with 20% of dairy products, 30% of cereals, 20% of oilseed and pulses, 20% of meat, 45% of fruits and vegetables, 35% of fish and seafood, 45% of roots and tubers are lost or wasted. Biotech intervention to decrease postharvest losses to ensure food supply, the efforts without losing the natural benefits of fruits and vegetables through innovative solutions focused on the real problems of Ethylene exposure, Temperature changes, Humidity/moisture, Microbial growth, Physical harm, respiratory rate control and Packing materials.
